

Dear Sir,

Ministry of MSME (MoMSME), Government of India in association with United Nations Industrial Development Organization (UNIDO) with funding support from Global Environmental Facility (GEF) is executing a project titled "**Promoting Market Transformation for energy efficiency in MSMEs**" across 10 energy intensive MSME clusters in India. The project is being executed by Energy Efficiency Services Limited (EESL). The '**Ankleshwar Chemical Cluster**' consisting of **chemical units** is one of the intervening clusters under the project. M/s Development Environergy Services Limited (DESL) has been entrusted as the project management consultant for the Ankleshwar cluster.

The project is supporting implementation of the following 5 prominent energy efficient technologies for the Chemical cluster:

1. **Scroll Chiller**
2. **IBR Boiler**
3. **ANFD**
4. **Direct Coupled Agitator System**
5. **Fitch Fuel System**

These technologies have been successfully demonstrated or in the process of demonstration in the cluster with the project support. The project now intends to accelerate the adoption of these technologies to bring in a market transformation for energy efficiency in the region.

In order to facilitate participation of technology suppliers in the project and also to discuss the methodology for participation in the project, a "**Local Service Provider Training Programme**" is being planned on **24th November 2021** at **3 PM**. The training programme will have the presence of officials from the Ministry of MSME, UNIDO and EESL. The event will consist of technical sessions on energy efficient technologies and project overview. The event agenda is enclosed for your reference.

We take the pleasure of inviting you to this important event. Please note that the LSP Training provides a win-win situation for the vendors for the above technology, as the project will support mass scale replication of the technologies.
